Tactical Care Officer Course Course

Course Overview

The Tactical Care Officer Course is based around, and is compliant with, the requirements of the National Police Firearms Training Curriculum - Module D13 (Enhanced Level).

The course focuses on the provision of effective trauma management in all environments, enabling officers to provide rapid and effective life-saving interventions, where access to emergency medical services may be limited or restricted by the tactical situation.

The training is suitable for all police officers, but particularly officers in specialist roles such as firearms, public order and surveillance and officers of the Serious and Organised Crime Agency. It will also suit officers of agencies such as the UK Border Agency and HM Revenue and Customs.

As with all Prometheus courses, the emphasis is on short lectures, high instructor to student ratios and role-related, scenario-based moulages. This course covers all of the competencies required for certification.

Aim

The Tactical Care Officer Course aims to equip police and law enforcement officers with the essential medical skills required to deliver lifesaving immediate medical care in a tactical or 'hot zone' situation.

Entry Criteria

No prior qualifications required, though some basic first aid training would be useful. There will be some pre-course reading required.

Certification

- The Royal College of Surgeons of Edinburgh
- Adult Basic Life Support
- Automated External Defibrillator
- Oxygen Therapy
- Complies with National Police Firearms Training Curriculum

On-site accommodation is available on a limited, first come – first served basis (B&B basis, ensuite, single

rooms) for courses delivered at the Hope-under-Dinmore training venue. Please phone the office on +44(0) 1568 613942 if you would like to book accommodation.
